Dear Hiring Manager,

The Software Developer position (1072686) at Microsoft sounds like a great match with the qualifications and skills that I have acquired during my undergraduate studies in Computer Science from IIT Goa. During my time there, I took up courses related to Data structure and algorithms, Operating Systems, Computer Networking, DBMS, etc. Currently, I hold a total of 8.91 out of 10 CGPA and have been a good student the entire term of my study at the University.

As a work experience, I have done two internships in big organizations (Mathworks & FoodWagon Pvt Ltd) and know how to work, coordinate and contribute in a team. I have worked on cross-domain projects such as software development and machine learning. I have worked on different tech stacks and frameworks like NodeJS and Django. I have experience working in various programming languages such as C, C++, Python, JavaScript, etc. I know how to work on an aggressive deadline without compromising the quality of work. I am a quick learner and enthusiastic about learning more about computer science and related fields.

As a Software Developer, my goal will be to continually increase my programming skills to present better solutions to Microsoft. Designing a program that is truly helpful to the user is my ultimate goal on every project, and I am delighted by the opportunity to apply my knowledge at Microsoft. I enjoy uncovering new ideas and would use them to advance Microsoft's vision in coming up with cutting-edge futuristic technologies and software.

I look forward to your call for a personal interview about this position.

Thank you in advance for taking the time to consider my application.

Sincerely,
Viranch Patel.
